AP Instructional Planning Report (2013)

Data Updated Aug 26, 2013, Report Run Jul 17, 2014

This subject-specific report compares your students' performance on specific topics in this AP Exam with the performance of all students on these same topics, helping teachers target areas for increased attention and focus in the curriculum. Other uses of the report, such as teacher evaluation or institutional ranking, are not warranted. Students who tested on late-testing dates are not included in this report.

Interpreting this report

Page 2

The charts on page 2 compare your students with the global population on the multiple-choice and free-response sections of this exam. The total population of students who took this exam (global group) is evenly divided into fourths, based on their performance on the section. These fourths do NOT correspond with the final AP score of 1, 2, 3, 4 or 5. The percentages of your students that fall into each fourth are represented by the blue bars. For example, the right-most blue bar shows the percentage of your students who fall into the highest fourth. If your students' score distribution is comparable to the global population, then your students will group evenly (approximately) across the fourths. Grouping of your students in the higher fourths indicates higher performance than the total population; grouping of students in the lower fourths indicates performance below the total population.

Page 3

On page 3, the following columns appear in each table: Number of Questions (Multiple Choice table only), Max Possible (Free Response table only), Global Mean and Group Mean. The Global Mean column provides all AP students' average scores on specific content areas; the Group Mean column provides this information for your students. The right side of each table, Number of Students in Group, shows the number of your students that fell into the fourths. Fourths are derived from dividing the total student population equally into four parts based on their performance in each content area. The numbers in the Number of Questions column for the multiple-choice content areas are simply the maximum possible scores. Beginning in 2011, no points will be deducted for incorrect answers to multiple-choice questions. The mean score for the content areas will be the average number of multiple choice questions answered correctly.

Some AP Exams have free-response questions that allow students to choose between topics; mean scores are not provided for those questions/problems of the exam. This is because the populations of AP students choosing each question when choice is permitted can be quite different.
